

Daniel Morris - TTS Student: 2007 - 2009

Current role: Graduate Process Engineer at KBR

Career pathway:

I achieved A levels in Maths, Chemistry, Biology and Applied ICT at Thomas Telford. I then completed an undergraduate Master's degree M.Eng in Chemical Engineering at the University of Manchester.

Advice for students:

Pursue what you love, it really is that simple! Whilst university can give you the skills to work, do not feel that you must go onto university to do well. For prospective engineers, there are some outstanding apprentice schemes out there that are definitely worth consideration. However, for Chemical/Process Engineers, you will need a degree which isn't a bad thing at all! Keep your options open and invest in yourself.

Plans for the future:

I intend to continue at KBR to become a Chartered Engineer and then see what happens. An option I will consider is to move into Carbon Capture after having a heavy interest in the area at university. Alternatively, I could move into something completely different!

Best memory of your time at Thomas Telford?

The friends I made and the quality of teaching. Thomas Telford enabled me to get the grades to go to university in the first place!
