

Y6 Geography Challenge

A BIG hello to all of our upcoming TTS students from the Geography Department! We'd love you to complete ONE of the challenges below - it's your choice!

3D Map-it

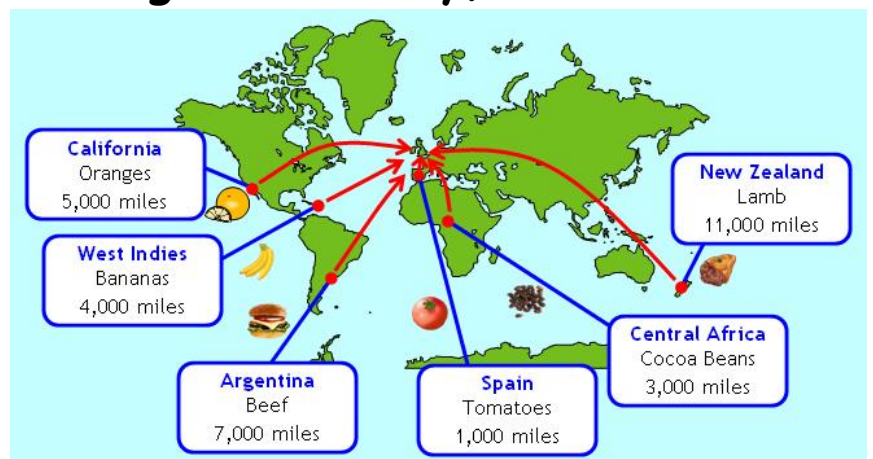

Create a 3D map using materials you have around your home! This example has used Lego to show Africa's physical features. You can do any area from the whole world, to continent, to county, or even your own local area!

Food miles

In the UK, we eat food from all-over the world from Tomatoes from Spain to Lamb all the way from New Zealand! Your task is to map your food miles. Look at the labels on your food at home, and add each item on a blank world map including the country, food item and how many miles it has travelled.

When you have put all your items on your map, add up your total food mileage!

Good luck and we look forward to seeing you soon!
